## Question 1

Correct

Mark 0.75 out of 0.75

**Use Pollard's  $\rho$  method with  $x_0 = 2$  and  $f(x) = x^2 + 1$  to determine the decomposition of the number  $n = 9553$  into two factors.**

*Important note: All answer boxes should be filled in using the convention that those not applicable must be filled in with  $x$ . All numbers must be filled in as positive numbers mod  $n$ .*

**Solution.****Iterations (results mod  $n$ ):**

$x_1 =$	<input type="text" value="5"/>	✓	$x_2 =$	<input type="text" value="26"/>	✓	$( x_2 - x_1 , n) =$	<input type="text" value="1"/>	✓
